

Concept Techniki SA has jointed its resources and expertise with a leading international partner, the [Solarig N-Gage group](#), in order to co-organize, prepare and provide reference O&M, monitoring and facility management services to utility scale IPOs. [Solarig Hellas SA](#) is a joint venture that was established in 2007. It offers to the Greek O&M market the international capacity and technical expertise of Solarig with the in-depth knowledge and knowhow of the Greek RES market, that is held by Concept.

Both companies combined have a vast record of experience in servicing O&M and facility management, which includes: ground-mounted utility-scale power plants; fixed, single and double-axis tracking technologies; CPV, thin-film and crystalline panels; centralized and decentralized inverters; large array rooftops and BIPV; small generation and off-grid installations.

The Solarig Hellas SA offers best-in-class services with an emphasis on trust and safety to our clients, backed by ISO9001 and ISO14001 certificates and adherence to the principles of the United Nations Global Compact as one of our corporate responsibility policies. Solarig Hellas SA is based in Heraclion (Crete) and has branch offices in Northern Greece (Thessaloniki) and Southern Greece (Athens). It counts on highly-qualified local and international staff, comprised of engineers, technicians and managers that have developed, built and operated over 300 MW in PV globally.

Solarig Hellas SA has developed and operates a state of the art control & analysis centre to evaluate, coordinate and manage the monitoring, security and production processes for every operating plant, worldwide. The objective of the centre is to unify processes, standardize and optimize processes and facilitate the worldwide expansion into new markets. Year after year, the Group has increased its own operating management portfolio. This growth is mainly due to two reasons: the incorporation of new MWs owned by third parties, and the increase and the improvement in the scope of services. All of this reinforces the trust bestowed upon the company by a large number of investment funds and companies from the sector that are looking to secure their investments.

For additional information and service inquiries, our visitors are welcome to visit the [Solarig Hellas SA](#) official site or to contact our call-center (Greek local calls: 80111 300013, International calls: 0030 2810 300013, mailto: info@solarig-hellas.com).
